# DOKTALE PROVIDES THE VERY BEST PROTECTION IN ALL WEATHER CONDITIONS

ZINCALUME combines the corrosion protection of aluminium with the sacrificial protection of zinc, giving it the advantage of both metals. As a result ZINCALUME has a significantly longer service life than a galvanised steel product using only zinc.

Non Combustible  
Class A Fire Rating

Lightweight  
Easy Installation

Recyclable  
Steel

Marine Environments  
Weatherproof Warranty\*

Available in Textured and Satin finishes the Doktale Shake has the rustic wood-grain appearance of traditional shakes with a deep-ribbed profile designed to provide strength, enhance shadow lines and create visual contrast. The Doktale Shake is the strongest metal tile profile available and offers significant foot traffic strength.

The aesthetic qualities of the Doktale Shake coupled with its strength and durability, has made it the first choice for building companies and architects alike. As with all Doktale roofs the lightweight benefits of steel roofing can offer considerable cost savings, while adding to the integrity of a building's structure.

SHAKE TILE	TEXTURED
Overall Length	1340 mm
Length of Cover	1260 mm
Width of Cover	368 mm
Roof Cover/Tile	.46m2/Pc

# DOKTALE OFFERS A WARRANTY YOU CAN RELY ON AND TRUST.

Doktale acrylic stone coating technology, pitched roofs and modular tile system allow it to offer its standard Satin and Textured Warranties in severe marine environments.

As a consequence, Doktale products and their Satin and Textured Weather Proof Warranties offer significant cost advantages over many pre painted products when used near the coast.

- Doktale Textured Tiles provide a natural "low glare" finish.
- There are no fading or "chalking" issues with Doktale Textured Tile.
- Doktale Textured Tiles are easily and cost effectively maintained.
- Doktale Textured Tiles produce less rain noise.

The distinct profile of the Mediterranean is reflected in the Doktale Roman Tile. The owner of this French provincial style home did considerable research to find that the Doktale Roman Tile was the most authentic design that offered all the benefits of lightweight durability.

There are two primary forces to contend with in roofing, weight and the forces of nature. Of all the roofing materials available steel is undoubtedly the strongest and yet is rated as a "lightweight roofing material".

# DOKTALE PUTS YOUR FAMILY'S SAFETY FIRST

In fact a Doktale roof is approximately five times lighter than an equivalent concrete or clay tile roof. This alone can result in considerable cost savings as a heavier roof requires more structural support to meet the safety regulations in some countries.

Because each metal tile is fixed by horizontal fastenings into battens each individual tile is very secure. This gives integrity to the entire roof and prevents wind uplift issues. In high winds, some vertically fastened roofs, have literally been "Lifted Off" the frame by wind uplift pressure.

Of equal importance, is the attention given to the fixing Of roof battens to the rafters. A Doktale roof is engineered for very High Wind Zones (VHWZ), in coastal regions is proven around the world, to withstand extreme wind conditions.

Replicates the traditional look of a concrete tile and is equally at home on both large estate homes and town houses.

You can never be certain that any building will withstand extreme natural disasters but you can be sure that a Doktale roof will withstand the extremes better than most, and we have over 28 years experience to prove it.

# CHOOSING A DOKTALE ROOF PROVIDES MANY BENEFITS & PEACE OF MIND

The pressed ribs on the traditional Classic profile make for a strong and robust tile that is popular with many building companies.

We have learnt from the mistakes of others, for the need to be very thorough in the testing of profiles, paints and resins prior to manufacture. Small tolerances in design performance can make a big difference to the success and weather tightness of a product. Be sure that you choose a proven Company with a thorough track record in research and performance.

# DOKTALE DESIGNED, RESEARCHED, TESTED & PROVEN

Doktaleprofiles have been tested and proven independent research facilities in numerous countries. From the most severe temperatures to hurricane force winds, fire, snow, torrential rains and more, Doktale has faced it all.

## SUSTAINABLE AND ENVIRONMENTALLY CONSCIOUS.

Doktale is committed to being an environmentally responsible manufacturer. All of our products are produced from the world's most recycled building material steel. It is also standard practice that all off cuts and disused materials are collected on site and recycled, which leaves a clean and safe working environment for builders and home owners alike.
